

MASTER SOUL FEEDING SCHEDULE

This schedule is a general guideline for soil and soilless gardening.

MIX DIRECTIONS

If possible, mix the Soul line just prior to feeding. If the Soul line is to be premixed for soil feeding or maintained in any hydro reservoir, ample mixing and aeration are recommended in order to prevent stagnation of the mixed solution. Use an air pump and air stones and add a circulation pump for the best mixing results. Regardless of timing, the solution should be pH checked and adjusted just before feeding. We suggest a pH range from 5.5 to 6.5 for our potting soil. Water to a light runoff. (If the soil is particularly dry, quickly prewater a small amount and then return a few minutes later to begin your feeding.)

Soul master feeding schedule will help you get the best quality and flavors out of your plants while also getting record breaking yields. The Soul master feeding schedule begins with adding 2 to 3 inches of coco fiber as a mulch to prevent soil compaction and allow for even drying of the soil.

We recommend using Oregonism XL, Nitro Bat Guano, Seabird Guano, Big Worm, Elemental, Uprising Grow, Bloom and Foundation as a top scratch.

Apply liquid nutrients per the table to the right in amounts based on container size. Once your plants start to grow rapidly, we recommend feeding with liquid nutrients at every watering until the final week of flush with water.

When introducing a new fertilizer to your program, start slow and gradually increase levels to ensure compatibility and avoid fertilizer excess. If you don't notice benefits in your harvest from any product you are using, whether ours or another company's, don't use it.
